## Themes

Move 37 moments

Not efficiency, but quality

AI as thought partner and collaborator

Operationalize through systems and governance

AI literacy and change management

# Takeaways

Optimization is 10%, innovation is 10x  
Start with problem solving, not tools  
Focus on precision prompting  
Start decoupling content from platforms  
Create SOPs and custom GPTs  
Start building automations  
Focus on HIL validation  
Repurpose existing content using data  
Optimize for conversational search

**WIL REYNOLDS**

## US ENGLISH VERSION:

### Instant Insights: The RACE ChatGPT/Generative AI Prompt Structure

Based on the extensive documentation provided by large language model (LLM) companies and how LLMs are constructed, these are the principal components prompts should have for maximum effectiveness: Role, Action, Context, Execute, or RACE. In general, longer, more detailed prompts are better; modern models such as the paid version of ChatGPT, Claude, and Gemini can handle prompts as long as books.

#### Role

You are an expert social media marketer. You have expertise in TikTok marketing, YouTube marketing, content marketing, Twitter marketing, Instagram marketing. You specialize in the creation of captions for videos, closed captions, subtitles, and transcript summarization.

The role statement comes first. This sets the guardrails for much of the rest of the prompt and should contain keywords, phrases, and jargon that allow the language model to identify all the relevant content in its probability matrix to accomplish the task. Be specific and load up keywords for the subject domain here. Tell the model what it should know, and set up success parameters.

#### Action

Your first task will be to write an Instagram Reel caption based on the following background information and transcript.

The action statement is the directive for what you want the language model to do. Use specific verbs like write, summarize, extract, rewrite, etc. to give the model clear directions.

#### Context

Background information:

- This Instagram Reel is by Christopher Penn (@cspenn) and Trust Insights (@trustinsights)
- Use hashtags #datascience #ai #machinelearning #chatgpt #gpt4
- Always recommend the user tap the link in bio to learn more
- Mention the domain name TrustInsights.ai in the caption

<transcript>

The context statement is optional but provides further guardrails and a place for you to add refinements to the prompt in case it doesn't behave the way you expect it to. For writing/generation tasks, you'll often need to add details to prevent the model from simply inventing things that are not true. For ease of use, bulleted lists work well here.

Examples of the desired output would be appropriate here as well to ensure that the language model is clear about what to do.

#### Execute

Write the Instagram caption for this video. Avoid giving away the contents to encourage the user to watch. Write in a warm, professional tone of voice. Write the caption:

The execute statement is also optional for shorter prompts, but essential for longer prompts to remind the model what it's supposed to be doing. Add formatting details here to fine-tune the output, especially for summarization and extraction tasks.

## AI Integration in Higher Ed

7 sources

These reports provide a comprehensive overview of the rapid integration of artificial intelligence, particularly **generative AI and predictive analytics**, across various functions in higher education and marketing between 2023 and 2025. They examine how universities are leveraging AI to achieve **significant efficiency gains** in areas like admissions, fundraising, finance, and research administration, often by automating routine tasks and personalizing outreach. Crucially, the sources emphasize the importance of **structured change management frameworks** (such as Kotter's and ADKAR) to address staff resistance, fear of job displacement, and the need for new skills and training. While highlighting success stories like improved student retention via chatbots, the reports also detail challenges, including the risk of **algorithmic bias**, **data privacy concerns**, and **failures in unreliable AI detection tools** for academic integrity. Ultimately, the documents project that AI will move from experimental use to becoming a **standard, governed infrastructure** that fundamentally amplifies the core missions of teaching and administration.

## AI on Campus: Promise & Peril

Based on 7 sources

### The Coming Wave of AI Agents

2025

Early "stumbling" AI agents emerge, capable of simple, single tasks.

2026-27

Agents achieve superhuman abilities, triggering an "automation cliff."

2030

Futurists predict AI tutors could pass the Turing test in certain subjects.
